68RFE Line Pressure Module

2008-2018 6.7L RAM	1030369
2019 6.7L RAM	1030367

PLEASE READ ALL INSTRUCTIONS BEFORE INSTALLATION

KIT CONTENTS

Please check you have all the parts listed before you begin installation

Kit # **1030369** (2008-2018 6.7L 68RFE) contains:

1600368	1300131
	
68RFE Pressure Module	Tie Wrap (6")
QTY: 1	QTY: 8

Kit # **1030367** (2019+ 6.7L 68RFE) contains:

1600369	1300131
 BLUE DOT	
68RFE Pressure Module	Tie Wrap (6")
QTY: 1	QTY: 8

Line Pressure Module Operation

The BD 68RFE Line Pressure Module increases line pressure above stock levels to aid in holding applied transmission clutches and prevent clutch slipping.

Stock line pressure varies between 60-160psi, with this module installed the range becomes 60-250psi. At low load situations the module will not command any additional pressure, but as engine boost rises (and power output increases) the module will increase the line pressure to 250psi.

Line Pressure Module installation

Connect the BD pressure module inline between the Line Pressure Sensor and the OEM harness. Secure the BD module to the OEM harness using the provided tie wraps. Route the MAP sensor wire over the transmission and to the back of the intake horn. Connect it in line with the factory MAP sensor. Secure the wiring harness with supplied tie wraps and keep away from moving parts like the steering shaft or front drive shaft. Ensure connections are fully mated and have clicked together.

Line pressure Sensor Connection
