

Hood Latch Release Lever

Hood Latch Modification/Install

Note: We designed this to work with the '99 to '02 7.3 Superduty Intercooler, 6.0 Superduty Intercoolers do have the same dimensions but we don't have any data installing them with this hood release. (Viewer discretion is advised) :)

1. Trim OEM vertical support bar and hood latch lever previously removed so that it doesn't interfere with the intercooler. See Picture.
2. Set new secondary hood latch release handle over original hood latch lever and align. See Picture.
3. Mark and drill two 1/4" holes
4. Mount new secondary release lever over original and trim off excess from old lever. The top hole on the release level uses a 6 x 1.0 x 16 mm bolt size. The bottom hole uses a 6 x 1.0 x 25 mm bolt. You will need to add a nut on the back of the second bolt. See picture.
5. Install support bar and hood latch onto core support. Adjust and verify proper operation.
